- Flexible career opportunities
- Competitive remuneration and benefits package

Responsibilities & experience

We are looking for an individual who can hit the ground running very quickly. He or she must be looking for challenging work with a zeal for improvement. The person should be an expert using technologies to the advantage of our clients. Should always have an eye on the client satisfaction at the same time make sure that things are in tight control. The person should be a quick and eager learner and have the abilities to adapt quickly to challenges.

We are looking for developers with at least 3 years of experience leading Java development teams with the following abilities:

- Strong OO design capabilities
- Potential client facing capabilities
- Working with cross-functional team including test, development, product and system admin
- Strong programming & design skills
- Very strong communication skills (English)
- Experience working with N-tier systems
- Understanding of agile development methodologies

Software skills

Mandatory:

- At least 3 years of experience working with Java/JavaEE based projects with very strong Object Oriented design skills
- Experience of working with one or more of the major application servers – Jboss, Weblogic, Websphere, Oracle Application Server
- Experience in either Spring or Seam
- Strong knowledge in any one of the major MVC frameworks – JSF, Struts, Wicket, GWT
- Demonstrable knowledge of either Hibernate or Toplink
- Good understanding of JPA and JPQL
- Familiarity with build tools like Maven and or Ant
- Any experience of Web services & JMS is desirable

Desirable:

- Experience using ESBs like Mule
- Experience of using BPM tools like JBPM
- Rule engines like Drools
- Knowledge of BPEL
- Experience working with Agile tools: Jira, Wiki etc.

Empower Logistics with Intelligence™

Logit One brings reliability, collaboration and optimization to logistics - empowering our customers to create new revenue streams and operational efficiencies. We turn truly innovative ideas for logistics into operational services - combining logistics, business process and IT expertise. Our mission is to enable logistics actors (shippers, forwarders, carriers, ports and terminals, beneficial cargo owners) to implement services and communities to support easy-to-use:

- End-to-end logistics planning & visibility
- Vertical and horizontal collaboration
- Sharing of information within supply chains
