Logit One™
One snapshot for logistics ™

www.logit-one.com

Logit One™ – A global, proactive & multi-modal freight visibility service

Key features

- End-to-end web-based visibility umbrella over existing systems and platforms

- Operational (re)planning to forecast knock-on effects of supply chain disturbances

- Pricing model allows unit price without upfront investment

Solution

A **single service** for quick access to transport status, exception driven, and supporting pro-active control towers to avoid supply chain disruptions.

Benefits

- Strategic:
  - ✓ Control tower functionality
  - ✓ Operations data for predictive analysis
  - ✓ Builds resilience

- Financial:
  - ✓ Safety stocks reduction
  - ✓ Reduced manual work
  - ✓ Accelerated cash cycle
  - ✓ Revenue generating service

- Operational:
  - ✓ Transparency
  - ✓ Reliability
  - ✓ Anticipate disruptions

For

- Shippers
- Beneficial cargo owners
- Forwarders and logistics integrators
- Container operators
- Port communities

Logit One™ – A global, proactive & multi-modal freight visibility service

Customer case: Global forwarder

Logit One™ was selected for implementing an integrated service visibility portal for a major ocean freight forwarder. It provides end-to-end visibility of shipment. Deployment includes LCL P2P (port to port), FCL D2D, and LCL D2D.

Improving situation awareness and improved control throughout the chain is a main objective.

Objectives

- **Solve the "Black Box" effect**: Without true awareness throughout the global supply chain, it is difficult to accurately predict when shipments will arrive, especially if delays occur en route.

- **Abandon disconnected data**: There are many proprietary container-tracking mechanisms, each with its own interface.

- **Provide consistent data**: Multiple data sources sometimes provide contradictory or incomplete information, and the resulting uncertainty has implications for operational costs & service quality.

Motivations

- A quick, easy route to more intelligent visibility

- Growing requests for qualified ocean freight services from shippers of sensitive goods.

- Reduced pipeline and contingency stocks, with reduced working capital requirements.

Unique added values

- One service to monitor multi modal logistics operations

- Transform SC wide data into reliable and complete information

- Create situational awareness to support operational decisions

- True visibility to reduce impact of deviations

Delivered as a service

Logit One™ is a SaaS (Software as a Service). This hosted visibility solution gives you lower upfront cost and no maintenance. Logit One™ is scalable, can be plemented fast and is very easy to use without extensive training.
