

Logit One NV

An introduction

Version: 2.01.2020

The Platform

The Logit One Platform provides SaaS solutions for end-to-end visibility, planning and collaboration within a multimodal environment.

Logit One's solutions are targeted to freight forwarders, 3PLs, 4PLs, logistics departments (shippers, BCOs), or any other party that orchestrates logistics.

These solutions should translate in concrete benefits that our customers can use daily:

1. Global reach: Collaborate seamlessly with partners and jointly act as a virtual global LSP
2. Quality of service: Show customers that you are in control, flexible and agile
3. Reliability of delivery: Provide reliable forecasts, and handle incidents proactively
4. Simplify work: Automate repetitive processes, freeing up resources for added value activities
5. Speed up processes: Responding to RFQs, or invoicing demurrage & detention to customers
6. Reduce your operational costs: Have more insight in costs, and avoid last-minute actions
7. Lower total cost of ownership: Considering all cost factors at once - no suboptimization

We customize our solutions to our customers' challenges, and provide operational support services to ensure quality and implementation.

Our flagship product: Visibility

Logit One Visibility provides end-to-end visibility, forecasting and event management for shipment monitoring. The service is provided by way of a user friendly end-to-end single window that you can share with your clients, who gets the transparency needed. Our solution is data-driven, which means that no expensive hardware devices have to be mounted on your cargo.

As stated by McKinsey in their publication "[The human side of digital supply chains](#)":

"In almost all supply-chain problems, the first and most fundamental requirement is visibility. Despite advances in technology and multi-million-dollar IT budgets, few companies have a full picture of their supply-chain operations. That lack of a "single source of truth" leads to widespread waste, arguments, and suboptimal decision making. Supply-chain visibility can be achieved by simple solutions, provided they do three things well. First, they must connect and consolidate data from multiple sources. Second, they must clean and organize that data to provide a single, reliable source of truth. Finally, they must present that data in a digestible way."

This is precisely what Logit One Visibility provides.

Our company

The company Logit One NV in Belgium forms the team that leads the business development, consulting, research and service management activities. The company was established in 2013 resulting from the management buy-out of Logit Systems AS (Norway). Since 2000, Logit Systems AS had developed solutions for door-to-door transport chain management and operational fleet management. Since 2011, the wholly-owned Indian subsidiary Logit One Technologies Pvt Ltd is our development & operations support center.

During the past 5 years, we developed operational and scalable SaaS (Software-as-a-Service) solutions in the area of end-to-end visibility, collaboration and logistics network management - together with our launching customers.

We have achieved a unique solution that is recognized in the European market, and in 2019 we won the 4th Physical Internet Award for Ventures, that is awarded by the European Technology Platform ALICE (the Alliance for Logistics Innovation through Collaboration in Europe) and the Physical Internet Initiative.

Now we are in the process of building up a larger customer portfolio and set a growth path in motion. In addition we want to utilize our India development center for professional services to other companies.
